## PRECAUTIONS TO BE OBSERVED BEFORE AND DURING SERVICING TO AVOID POSSIBLE EXPOSURE TO EXCESSIVE MICROWAVE ENERGY

(a) Do not operate or allow the oven to be operated with the door open.
(b) Make the following safety checks on all ovens to be serviced before activating the magnetron or other microwave source, and make repairs as necessary: (1) Interlock operation, (2) Proper door closing, (3) Seal and sealing surfaces (arcing, wear, and other damage), (4) Damage to or loosening of hinges and latches, (5) Evidence of dropping or abuse.
(c) Before turning on power to the microwave oven for any service test or inspection within the microwave generating compartments, check the magnetron, wave guide or transmission line, and cavity for proper alignment, integrity, and connections.
(d) Any defective or misadjusted components in the interlock, monitor, door seal, and microwave generation and transmission systems shall be repaired, replaced, or adjusted by procedures described in this manual before the oven is released to the owner.
(e) A microwave leakage check to verify compliance with the Federal performance standard should be performed on each oven prior to release to the owner.

## SAFETY AND PRECAUIIONS

## 1. FOR SAFE OPERATION

Damage that allows the microwave energy (that cooks or heats the food) to escape will result in poor cooking and may cause serious bodily injury to the operator.

## IF ANY OF THE FOLLOWING CONDITIONS EXIST, OPERATOR MUST NOT USE THE APPLIANCE.

(Only a trained service personnel should make repairs.)
(1) A broken door hinge.
(2) A broken door viewing screen.
(3) A broken front panel, oven cavity.
(4) A loosened door lock.
(5) A broken door lock.

The door gasket plate and oven cavity surface should be kept clean.
No grease, soil or spatter should be allowed to build up on these surfaces or inside the oven.
DO NOT ATTEMPT TO OPERATE THIS APPLIANCE WITH THE DOOR OPEN.
The microwave oven has concealed switches to make sure the power is turned off when the door is opened.
Do not attempt to defeat them.
DO NOT ATTEMPT TO SERVICE THIS APPLIANCE UNTIL YOU HAVE READ THIS SERVICE MANUAL.

## 2. FOR SAFE SERVICE PROCEDURES

1. If the oven is operative prior to servicing, a microwave emission check should be performed prior to servicing the oven.
2. If any certified oven unit is found to servicing, a microwave emission check should be performed prior to servicing the oven.
(1) inform the manufacturer, importer or assembler,
(2) repair the unit at no cost to the owner,
(3) attempt to ascertain the cause of the excessive leakage,
(4) tell the owner of the unit not to use the unit until the oven has been brought into compliance.
3. If the oven operates with the door open, the service person should tell the user not to operate the oven and contact the manufacturer immediately.

## IMPORTANT

The wire in this mains lead coloured in accordance with the following code.

| Green-and-yellow | : Earth |
| :--- | :--- |
| Blue | : Neutral |
| Brown | : Live |

As the colours of the wires in the mains lead of this appliance may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows.
The wire which is coloured green-and-yellow must be connected to the terminal in the plug which is marked with the letter 'E', earth symbol or coloured green-and-yellow.
The wire which is coloured blue must be connected to the terminal which is marked with the letter ' N ' or coloured black. The wire which is coloured brown must be connected to the terminal which is marked with the letter 'L' or coloured red.

## NOTE

This oven is designed for counter-top use only.

## INSTAШATION

## 1. Steady, flat location

This microwave oven should be set on a steady, flat surface.
This microwave oven is designed for counter top use only.
2. Leave space behind and side

All air vents should be kept a clearance. If all vents are covered during operation, the oven may overheat and, eventually, cause failure.
3. Away from radio and TV sets

Poor television reception and radio interference may result if the oven is located close to a TV, radio, antenna or feeder and so on. Position the oven as far from them as possible.
4. Away from heating appliances and water taps

Keep the oven away from hot air, steam or splash when choosing a place to position it, or the insulation might be adversely affected and breakdowns occur.
5. Power supply

Check your local power source. This microwave oven requires a current of approximately 13amperes, $230 \mathrm{Volts}, 50 \mathrm{~Hz}$.
Power supply cord is about 1.2 meters long.
The voltage used must be the same as specified on this oven. Using a higher voltage may result in a fire or other accident causing oven damage. Using low voltage will cause slow cooking. We are not responsible for damage resulting from use of this oven with a voltage of ampere fuse other than those specified.
This appliance is supplied with cable of special type, which, if damaged, must be repaired with cable of same type.
Such a cable can be purchased from DAEWOO and must be installed by a Qualified Person.
6. Examine the oven after unpacking for any damage such as:

A misaligned door, broken door or a dent in cavity.
If any of the above are visible, DO NOT INSTALL, and notify dealer immediately.
7. Do not operate the oven if it is colder than room temperature.
(This may occur during delivery in cold weather.) Allow the oven to become room temperature before operating.

## EARTHING INSTRUCTIONS

This appliance must be earthed. In the event of an electrical short circuit, earthing reduces the risk of the electric shock by providing an escape wire for the electric current. This appliance is equipped with a cord having a earthing wire with a earthing plug. The plug must be plugged into an outlet that is properly installed and earthed.

## WARNING

Improper use of the earthing plug can result in a risk of electric shock.
Consult a qualified electrician or serviceman if the earthing instructions are not completely understood, or if doubt
exists as to whether the appliance is properly earthed, and either:
If it is necessary to use an extension cord, use only a 3 -wire extension cord that has a 3-blade earthing plug, and a 3 -slot receptacle that will accept the plug on the appliance.
The marked rating of the extension cord should be equal to or greater than the electrical rating of the appliance, or Do not use an extension cord.

## CONTROLPANEL

When blinking, the oven is operating in "COMBI" cooking mode.

When blinking, the oven is operating in "GRILL" cooking mode.

When blinking, the oven is operating in "MICROWAVE" cooking mode.

When blinking, the oven is operating in "PROGRAM COOK" cooking mode.

When blinking, the oven is operating in "PIE" cooking mode.

When blinking, the oven is operating in "CONVECTION" cooking mode.

Microwave Power LevelUsed to select the variable microwave power level. If this button(pad) is pressed for more than 1.3 sec , number is scrolled up automatically.

Dial Knob-
Used to input the cooking time and weight.

## Stop/Clear Button-

 Used to pause and clear all information manually put into the oven.
## DISASSEMBLY AND ASSEMBLY

Cautions to be observed when trouble shooting.

Unlike many other appliances, the microwave oven is high-voltage, high-current equipment.
It is completely safety during normal operation.
However, carelessness in servicing the oven can result in an electric shock or possible danger from a short circuit. You are asked to observe the following precautions carefully.

1. Always remove the power plug from the outlet before servicing.
2. Use an insulated screwdriver and ware rubber gloves when servicing the high voltage side.
3. Discharge the high voltage capacitor before touching any oven components or wiring.
(1) Check the earthed.

Do not operate on a two-wire extension cord.
The microwave oven is designed to be used with earthed.
It is imperative, therefore, to make sure it is earthed properly before beginning repair work.
(2) Warning about the electric charge in the high voltage capacitor. For about 30 seconds after the operation stopped and electric charge remains in the high voltage capacitor.
When replacing or checking parts, short between oven chassis and the negative high terminal of the high voltage capacitor, by using a properly insulated screwdriver to discharge.
4. When the 15A fuse is blown out due to the operation of the monitor switch; replace primary interlock switch, secondary interlock switch and interlock monitor switch.
5. After repair or replacement of parts, make sure that the screws are properly tightened, and all electrical connections are tightened.
6 . Do not operate without cabinet.

## CAUTION

Service personnel should remove their watches whenever working close to or replacing the magnetron.

## WARNING

When servicing the appliance, need a care of touching or replacing high potential parts because of electrical shock or exposing microwave. These parts are as follows - HV Transformer, Magnetron, HV Capacitor, HV Diode.

## DISASSEMBLY AND ASSEMBLY

## 1. To remove cabinet

(1) Remove four screws on cabinet back.
(2) Push the cabinet backward.

## 2. To remove guide wind assembly

(1) Remove two screws for earthing and for fixing to rear-plate.
(2) Remove the noise filter from the guide wind.
(3) Pull the fan from the motor shaft.
(4) Remove two screws which secure the motor shaded pole.
(5) Remove the motor shaded pole.
(6) Reverse the above steps for reassembly.

## 3. To remove H.V.transformer

(1) Remove four screws which secure the H.V.transformer to the base plate.
(2) Remove the H.V.transformer.
(3) Reverse the above steps for reassembly.

## 4. To remove high voltage capacitor

(1) Remove a screw which secure the grounding ring terminal of the H.V. diode and the capacitor holder.
(2) Remove the H.V. diode from the capacitor holder.
(3) Reverse the above steps for reassembly.

High voltage circuit wiring

## DISASSEMBLY AND ASSEMBLY

## 5. To remove magnetron

(1) Remove three screws which secure the magnetron.
(2) Remove the magnetron.
(3) Reverse the above steps for reassembly.

## CAUTION

Never install the magnetron without the metallic gasket plate which is packed with each magnetron to prevent microwave leakage. Whenever repair work is carried out on magnetron, check the microwave leakage. It shall not exceed $4 \mathrm{~mW} / \mathrm{cm}^{2}$ for a fully assembled oven with door normally closed.

## 6. To remove control panel assembly

## KOC-972T, KOC-982T

(1) Remove a screw which secure the control panel assembly to the oven front plate.
At the same time, draw forward the control panel assembly from the oven front plate.
(2) Remove nine screws which secure the main and sub PCB assembly to control panel.
(3) Remove buttons and dial knob.

## 9. Method to reduce the gap between the door seal and the oven front surface.

(1) To reduce gap located on part ' $A$ '

- Loosen two screws on stopper hinge top, and then push the door to contact the door seal to oven front surface.
- Tighten two screws.
(2) To reduce gap located on part 'B'
- Loosen two screws on stopper hinge under, and then push the door to contact the door seal to oven front surface.
- Tighten two screws.
(3) To reduce gap located on part ' $C$ '

- Loosen a screw on interlock switch assembly located bottom of oven body.
- Draw the interlock switch assembly inward as possible to engage with hook on the door bottom.
- Tighten a screw.
(4) To reduce gap located on part ' $D$ '
- Loosen a screw on interlock switch assembly located top of oven body.
- Following steps are same as step (3).

## NOTE

Small gap may be acceptable if the microwave leakage does not exceed $1 \mathrm{~mW} / \mathrm{cm}^{2}$.

## NOTE

The door on a microwave oven is designed to act as an electronic seal preventing the leakage of microwave energy from the oven cavity during the cook cycle. This function does not require that the door be air-tight, moisture (condensation) Tight or light-tight. Therefore, the occasional appearance of moisture, light or the sensing of gentle warm air movement around the oven door is not abnormal and do not of themselves, indicate a leakage of microwave energy from the oven cavity. If such were the case, your oven could not be equipped with a bent, the very purpose of which is to exhaust the vapor-laden air from the oven cavity.

## 10. To remove motor syncro and under heater

(1) Cut the syncro motor cover parts from the base plate.
(2) Remove two screws which secure the motor syncro and supporter to bracket syncro motor.
(3) Remove two screws and under heater assembly in cavity

## 11. To remove grill heater assembly

## KOC-972T

(1) Remove a nut which secure the heater holder inserting the wire of grill heater to side plate.
(2) Remove two nuts and a screw which secure the heater bracket to grill heater.
(3) Remove two heater brackets.
(4) Pull the heater holder inward and then remove the grill heater.
(5) Reverse the above steps for reassembly.

## KOC-982T,KOC-983T,KOC-984T,KOC-985T

(1) Remove two screws which secure the cover insulator *t to top plate.
(2) Remove the harness between heaters.
(3) Remove two screws for removing heater brackets.
(4) Remove heaters.
(5) Reverse the above steps for reassembly.

## 12. To remove convection part assembly (KOC-982T,KOC-983T,KOC-984T,KOC-985T only)

(1) Remove cover *b and cover insulator *b protecting convection part assembly. - release two lances of cover insulator *b.
(2) Remove four screws which secure the convection part assembly to the cavity rear plate.
(3) Remove a nut holding the convection fan and the pipe.
(4) Remove two screws which secure the bracket motor to cover insulator.
(5) Remove the cooling fan.
(6) Remove two screws which secure the motor shaded pole to the bracket motor.
(7) Reverse the above steps for reassembly.

## INTERLOCK MECHANISM AND ADJ USTMENT

The door lock mechanism is a device which has been specially designed to completely eliminate microwave radiation when the door is opened during operation, and thus to perfectly prevent the danger resulting from the leakage of microwave.

## 1. Primary interlock switch

When the door is closed, the hook locks the oven door. If the door is not closed properly, the oven will not operate.
When the door is closed, the hook pushes the button of the microswitch.
Then the button of the primary interlock switch bring it under "ON" condition.
2. Secondary interlock switch, door open monitor switch and interlock monitor switch

When the door is closed, the hook pushes the latch lever downward.
The latch lever presses the button of the interlock monitor switch to bring it under "OFF" condition and presses the button of the secondary interlock switch and door open monitor switch to bring it under "ON" condition.

## ADJUSTMENT

## Interlock monitor switch

When the door is closed, the interlock monitor switch should be opened before other switches are closed.
When the door is opened, the interlock monitor switch should be closed after other switches are opened.

## 3. Adjustment steps

(1) Loosen two mounting screws.
(2) Adjust interlock switch assembly position.
(3) Make sure that latch lever moves smoothly after adjustment is completed.
(4) Tighten completely two mounting screws.

## NOTE

Microwave emission test should be performed after adjusting interlock mechanism.
If the microwave emission exceed $4 \mathrm{~mW} / \mathrm{cm}^{2}$, readjust interlock mechanism.

## TROUBLE SHOOTING GUIDE

Following the procedures below to check if the oven is defective or not.

1. Check grounding before checking trouble.
2. Be careful of the high voltage circuit.
3. Discharge the high voltage capacitor.
4. When checking the continuity of the switches, fuse or high voltage transformer, disconnect one lead wire from these parts and then check continuity with the AC plug removed. To do otherwise may result in a false reading or damage to your meter.

## NOTE

When electric parts are checked, be sure the power cord is not inserted into the wall outlet.
Check wire harness, wiring, and connected of the terminals and power cord before check parts listed below.
(TROUBLE 1) Oven does not operate at all; any inputs can not be accepted.

## NOTE

All these switches must be replaced at the same time, please refer to (7.Interlock Mechanism and Adjust) for adjustment instructions.
(TROUBLE 2) Grill heater (top heater) is not heated; Food will not become hot.

## TROUBLE SHOOTING GUIDE

(TROUBLE 3) No microwave oscillation even though fan motor rotates.

(TROUBLE 4) Display shows all figures selected, but oven does not start cooking, even though desired program and time are set and start pad is tapped.

(TROUBLE 5) 1) Under heater is not heated; Food will not become hot.
2) Convection motor does not rotate.

(TROUBLE 6) The following visual conditions indicate a probable defective touch control circuit or button P.C.B. assembly.

1. Incomplete segments
(1) Segments missing
(2) Partial segments missing
(3) Digit flickering other than normal fluorescent slight flickering
(4) 0 does not display when power is on.
2. A distinct change in the brightness of one or more numbers exists in the display.
3. One or more digits in the display are not on when they should be.
4. Display indicates a number different from one touched. (for example, even if one touched 5, 3 appears in the display.
5. Specific numbers (for example, 2 or 3 ) do not display when the button is touched.
6. Display does not count down or up with time cooking or clock operation.

7. Oven is programable and cooks normally but no display shows.
8. Display obviously jumps in time while counting down.
9. Display counts down noticeably too fast while cooking.
10. Display does not show the time of day when clear button is touched.
11. Oven lamp and turntable motor do not stop although cooking is finished.

Check if the RELAY (RY3) contacts close and if they are close, replace touch control circuit.

## NOTE

Before following the particular steps listed above in the trouble shooting guide for the button keyboard's failure, please check for the continuity of each wire-harness between the button keyboard and P.C.B. assembly.

## BUTTON KEYBOARD CHECK PROCEDURE

1. Type of button names

(key metrix and circuit diagram)

The tact switch keyboard consists of 10 keys which configurations are described above.
2. Key check procedure

To determine if the tact switch keyboard is defective or not, check the continuity of each button(key) contacts with a multimeter.

| (1) PROGRAM COOK | button : between 4 and 15 |
| :--- | :--- |
| (2) TIME DEFROST | button : between 8 and 14 |
| (3) WEIGHT DEFROST | button : between 8 and 14 |
| (4) COMBI | button : between 6 and 15 |
| (5) GRILL | button : between 8 and 12 |
| (6) M/W | button : between 8 and 15 |
| (7) PIE | button : between 8 and 10 |
| (8) SPEEDY COOK | button : between 6 and 10 |
| (9) TEMP | button : between 6 and 14 |
| (10) START/CLOCK | button : between 2 and 12 |
| (11) STOP/CLEAR | button : between 2 and 14 |

## MEASUREMENTAND TEST

## 1. MEASUREMENT OF THE MICROWAVE POWER OUTPUT

Microwave output power can be checked by indirectly measuring the temperature rise of a certain amount of water exposed to the microwave as directed below.

## PROCEDURE

1. Microwave power output measurement is made wit the microwave oven supplied at rated voltage and operated at its maximum microwave power setting with a load of $1000 \pm 5 \mathrm{cc}$ of potable water.
2. The water is contained in a cylindrical borosilicate glass vessel having a maximum material thickness of 3 mm and an outside diameter of approximately 190 mm .
3. The oven and the empty vessel are at ambient temperature prior to the start of the test.

The initial temperature of the water is $10 \pm 2{ }^{\circ} \mathrm{C}\left(50 \pm 3.6^{\circ} \mathrm{F}\right)$.
It is measured immediately before the water is added to the vessel.
After addition of the water to the vessel, the load is immediately placed on the center of the shelf, which is in the lowest normal position.
4. Microwave power is switched on.
5. Heating time should be exactly $\mathbf{A}$ seconds.

Heating time is measured while the microwave generator is operating at full power.
The filament heat-up time for magnetron is not included.
6. The initial and final temperature of water is selected so that the maximum difference between the ambient and final water temperature is 5 K .

7. The microwave power output $P$ in watts is calculated from the following formula:

$$
P=4187 \times \triangle T / t
$$

$-\triangle \mathrm{T}$ is difference between initial and ending temperature.

- $t$ is the heating time.

The power measured should be B (refer to Specifications) $W \pm 10.0 \%$.

## CAUTION

1. Water load should be measured exactly to 1 liters.
2. Input power voltage should be exactly specified voltage(Refer to SPECIFICATIONS).
3. Ambient temperature should be $20 \pm 2^{\circ} \mathrm{C}\left(68 \pm 3.6^{\circ} \mathrm{F}\right)$

Heating time for power output:

| $\mathbf{A}($ second $)$ | 70 | 64 | 60 | 56 | 52 | 49 | 47 | 44 | 42 | 40 | 38 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathbf{B}(\mathrm{~W})$ | 600 | 650 | 700 | 750 | 800 | 850 | 900 | 950 | 1000 | 1050 | 1100 |

## 2. ELECTRICAL CONTINUITY CHECK OF INTERLOCK SWITCH

## NOTE

Remove the power plug from the wall receptacle before testing.

## PROCEDURE

1. Primary interlock switch
(1) Disconnect two connectors from primary interlock switch.
(2) Connect the ohm-meter leads between the terminals of the primary interlock switch.
2. Read the value of resistance between the terminals of the switch, when the door is opened, and when the door is closed.
3. Secondary interlock switch
(1) Disconnect two connectors from secondary interlock switch.
(2) Connect the ohm-meter leads between the terminals of the secondary interlock switch.
(3) Read the value of resistance between the terminals of the switch, when the door is opened, and when the door is closed.
4. Monitor interlock switch
(1) Disconnect the lead wire connecting the primary interlock switch and interlock monitor switch from primary interlock switch terminal.
(2) Connect the ohm-meter leads between the lead wire connector disconnected as item1 and the power supply neutral plug pin.
(3) Read the value of resistance between the lead wire connector and the power supply neutral plug pin, when the oven door is opened, and when the oven door is closed.

## JUDGEMENT

- The value of resistance should be applied to the value specified below.

| Switch | Door Open | Door Close |
| :--- | :---: | :---: |
| Primary interlock switch | $\infty$ | 0 |
| Secondary interlock switch | $\infty$ | 0 |
| Interlock monitor circuit | 0 | $\infty$ |

- When value obtained is not acceptable, the switch should be replaced or adjusted again.

## 3. MICROWAVE RADIATION TEST

## WARNING

Make sure to check the microwave leakage before and after repair of adjustment.
Always start measuring of an unknown field to assure safety for operating personnel from microwave energy. Do not place your hands into any suspected microwave radiation field unless the safe density level is known. Care should be taken not to place the eyes in direct line with the source of microwave energy.
Slowly approach the unit under test until the radiometer reads an appreciable microwave leakage from the unit under the test.

## PROCEDURE

1. Prepare Microwave Energy Survey Meter, 600cc glass beaker, and glass thermometer $100^{\circ} \mathrm{C}\left(212^{\circ} \mathrm{F}\right)$.
2. Pour $275 \mathrm{cc} \pm 15 \mathrm{cc}$ of tap water initially at $20 \pm 5^{\circ} \mathrm{C}\left(68 \pm 9^{\circ} \mathrm{F}\right)$ in the 600 cc glass beaker with an inside diameter of approx. 95 mm ( 3.5 in .).
3. Place it at the center of the tray and set it in a cavity.
4. Close the door and operate the oven.
5. Measure the leakage by using Microwave Energy Survey Meter with dual ranges, set to 2450 MHz .

- Measured radiation leakage must not exceed the value prescribed below. Leakage for a fully assembled oven with door normally closed must be less than $4 \mathrm{~mW} / \mathrm{cm}^{2}$.
- When measuring the leakage, always use the 5 cm (2 in.)
 space cone with probe.
Hold the probe perpendicular to the cabinet and door.
Place the space cone of the probe on the door, cabinet, door seem, door viewing screen, the exhaust air vents and the suction air vents.
- Measuring should be in a counter-clockwise direction at a rate of $1 \mathrm{in} . / \mathrm{sec}$.

If the leakage of the cabinet door seem is unknown, move the probe more slowly.

- When measuring near a corner of the door, keep the probe perpendicular to
the areas making sure the probe end at the base of the cone does not get closer than 2 in. from any metal. If it does not, erroneous reading may result.

## 4. COMPONENT TEST PROCEDURE

- High voltage is present at the high voltage terminal of the high voltage transformer during any cooking cycle.
- It is neither necessary nor advisable to attempt measurement of the high voltage.
- Before touching any oven components or wiring, always unplug the oven from its power source and discharge the capacitor.

## 1. High voltage transformer

(1) Remove connections from the transformer terminals and check continuity.
(2) Normal readings should be as follows :

Secondary winding ... Approx. $100 \Omega \pm 10 \%$
Filament winding ... Approx. $0.1 \Omega$
Primary winding ... Approx. $1.5 \Omega$

## 2. High voltage capacitor

(1) Check continuity of capacitor with meter on the highest OHM scale.
(2) A normal capacitor will show continuity for a short time, and then indicate $9 \mathrm{M} \Omega$ once the capacitor is charged.
(3) A shorted capacitor will show continuous continuity.
(4) An open capacitor will show constant $9 \mathrm{M} \Omega$
(5) Resistance between each terminal and chassis should be infinite.

## 3. High voltage diode

(1) Isolate the diode from the circuit by disconnecting the leads.
(2) With the ohmmeter set on the highest resistance scale measure the resistance across the diode terminals.

Reverse the meter leads and again observe the resistance reading.
Meter with 6V, 9 V or higher voltage batteries should be used to check the front-back resistance of the diode, otherwise an infinite resistance may be read in both directions.
A normal diode's resistance will be infinite in one direction and several hundred $\mathrm{k} \Omega$ in the other direction.

## 4. Magnetron

For complete magnetron diagnosis, refer to "Measurement of the Microwave Output
Power." Continuity checks can only indicate and open filament or a shorted magnetron.
To diagnose for an open filament or a shorted magnetron,
(1) Isolate magnetron from the circuit by disconnecting the leads.
(2) A continuity check across magnetron filament terminals should indicate $0.1 \Omega$ or less.
(3) A continuity check between each filament terminal and magnetron case should read open.

## 5. Fuse

If the fuse in the primary and monitor switch circuit is blown when the door is opened, check the primary and monitor switch before replacing the blown fuse.
In case the fuse is blown by an improper switch operation, replace the defective switch and fuse at the same time.
Replace just the fuse if the switches operate normally.

## PRINTED WIRING BOARD

## 1. CIRCUIT CHECK PROCEDURE

## 1. Low Voltage Transformer check

- The low voltage transformer is located on the P.C.B.
- Measuring condition (input voltage) : $230 \mathrm{VAC} / 50 \mathrm{~Hz}$

| KOC-972T/982T |  |  | KOC-983T/984T/985T |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| L.V.T. : DMR-101FS |  |  | L.V.T. : DMR-984FS |  |  |
|  | Terminal | Voltage |  | Terminal | Voltage |
|  | 1-2 | $230 \mathrm{VAC} / 50 \mathrm{~Hz}$ |  | 1-3 | $230 \mathrm{VAC} / 50 \mathrm{~Hz}$ |
|  | 4-5 | 13.0 VAC |  | 6-7 | 10.5 VAC |
|  | 6-7 | 35.0 VAC |  | 7-8 | 10.5 VAC |
|  | 8-10 | 3.0 VAC |  | 9-10 | 2.6 VAC |

Secondary side voltage of the low voltage transformer changes in proportion to fluctuation of power source voltage.
The allowable tolerance of the secondary voltage is within $\pm 5 \%$ of normal voltage.

## 2. Voltage check

- Key check point ( 1~5:Micom Pin, 6:Display Pin )

| NO | CHECK POINT | REMARK |
| :---: | :---: | :---: |
| 1 | PIN 63, 64 | +5 VDC $\pm 5 \%$ |
| 2 | PIN 29, 32, 62 | 0 V |
| 3 | PIN 28 | +5 VDC |
| 4 | PIN 45 | 5 <br> T: $20 \mathrm{~ms}(50 \mathrm{~Hz})$ |
| 5 | PIN 30, 31 |  <br> T: 0.25 us ( 4.0 MHz ) |
| 6 | PIN 1, 25 | 2.6 VAC (Display filament voltage) |

- Check method

| NO | VOLTAGE | REMARK |  |
| :---: | :--- | :--- | :--- |
|  |  | KOC-982T | KOC-983T/984T/985T |
| 1 | +5 VDC | Replace Q3,ZD2,R25,C12 | Replace Q3,ZD3,R26,C10 |
| 2 | +12 VDC | Replace D2~D5,EC3,C11 | Replace D7,D8,EC2,EC3,C14,C11 |
| 3 | -24 VDC | Replace D6,EC4,R28,R29,ZD4 | Replace D9,D10,EC4,EC5,C15 |

## NOTE

The marks of the above corresponding voltages ( $+5,+12,-24 \mathrm{VDC}$ ) are written on the PCB
Each measuring points must be measured with GND points.

## 3. Display Problems

| NO | CAUSE | MEASUREMENT | RESULT | REMEDY |
| :---: | :--- | :--- | :--- | :--- |
| 1 | Poor contact between <br> P.C.B. and display <br> filament |  <br> 25 | 2.6 VAC |  <br> 25 on the P.C.B. |
| 2 | The display has some <br> trouble in its segment or <br> grid | Refer to The display trouble <br> shooting data below | Replace P.C.B. <br> assembly |  |
| 3 | Loss vacuum in the <br> display | Find white spot | Replace P.C.B. <br> assembly |  |

- The display trouble shooting data

| TROUBLE | DISPLAY NAME \& PIN NO. | MICOM OUTPUT IN PIN NO. |
| :--- | :--- | :---: |
| Grid 1 doesn't come on. | Grid 1 (G1), 4, 7 | 13 |
| Grid 2 doesn't come on. | Grid 2 (G2), 10 | 16 |
| Grid 3 doesn't come on. | Grid 3 (G3), 14 | 18 |
| Grid 4 doesn't come on. | Grid 4 (G4), 17 | 17 |
| Grid 5 doesn't come on. | Grid 5 (G5), 21 | 24 |
| Segment a doesn't come on from G1 to G5 | Segment a, 23 | 26 |
| Segment b doesn't come on from G1 to G5 | Segment b, 22 | 25 |
| Segment c doesn't come on from G1 to G5 | Segment c, 20 | 23 |
| Segment d doesn't come on from G1 to G5 | Segment d, 19 | 22 |
| Segment e doesn't come on from G1 to G5 | Segment e, 18 | 21 |
| Segment f doesn't come on from G1 to G5 | Segment f, 16 | 20 |
| Segment g doesn't come on from G1 to G5 | Segment g, 15 | 19 |
| Segment $h$ doesn't come on from G1 to G5 | Lower bar h, 5 | 14 |
| Segment i doesn't come on from G1 to G5 | Upper bar i, 6,8,9,11 | 15 |

## PRINTED WIRING BOARD

## 4. Case of no microwave oscillation

(1) Situation : When touching M/W button, oven lamp turns on, fan motor and turntable motor rotate and cook indicator in the display comes on.

- CAUSE : Relay 1 (RY1) does not operate.

- Check method

| STAGE | POINT A | POINT B |
| :--- | :--- | :--- |
| RELAY ON | +5 VDC | GND |
| RELAY OFF | GND | +12 VDC |

(2) Situation: When touching M/W button, oven lamp does not turn on and turntable motor does not rotate but cook indicator in the display comes on.

- CAUSE : Relay 4 (RY4) does not operate.(KOC-972T/982T) Relay 3 (RY3) does not operate.(KOC-983T/984T/985T)

- Check method

| STAGE | POINT A | POINT B |
| :--- | :--- | :--- |
| RELAY ON | +5 VDC | GND |
| RELAY OFF | GND | +12 VDC |

(3) Situation: When touching M/W button, oven lamp turns on and fan motor does not rotate but cook indicator in the display comes on.

- CAUSE : Relay 5 (RY5) does not operate.(KOC-972T/982T)

Relay 4 (RY4) does not operate.(KOC-983T/984T/985T)

- Check method

| STAGE | POINT A | POINT B |
| :--- | :--- | :--- |
| RELAY ON | +5 VDC | GND |
| RELAY OFF | GND | +12 VDC |

## 5. Case of no heating of upper heater

When touching TEMP COOK \& COMBI button, oven lamp turns on, fan motor and turntable motor rotate and cook indicator in the display comes on.

- CAUSE : Relay 2 (RY2) does not operate.

| KOC-972T/982T | KOC-983T/984T/985T |
| :---: | :---: |
|  |  |

- Check method

| STAGE | POINT A | POINT B |
| :--- | :--- | :--- |
| RELAY ON | +5 VDC | GND |
| RELAY OFF | GND | +12 VDC |

## 6. Case of no heating of lower heater

When touching TEMP COOK \& PIE button, oven lamp turns on, fan motor and turntable motor rotate and cook indicator in the display comes on.

- CAUSE : Relay 6 (RY6) does not operate.(KOC-972T/982T)

Relay 5 (RY5) does not operate.(KOC-983T/984T/985T)

| KOC-972T/982T | KOC-983T/984T/985T |
| :---: | :---: |
|  |  |

- Check method

| STAGE | POINT A | POINT B |
| :--- | :--- | :--- |
| RELAY ON | +5 VDC | GND |
| RELAY OFF | GND | +12 VDC |

## PRINTED WIRING BOARD

## 7. Case of no stopping of the count down timer

When the door is opened during operation, the count down timer does not stop.

| KOC-972T/982T | KOC-983T/984T/985T |
| :---: | :---: |
|  |  |

- Check method

| STAGE | POINT A | POINT B |
| :--- | :--- | :--- |
| Door opened | Open | +5 VDC |
| Door closed | Closed | GND |

## NOTE

Check the state (ON, OFF) of the secondary interlock switch by resistance measurement.

## 8. Case of appearring Err6 on the display

| KOC-972T/982T | KOC-983T/984T/985T |
| :---: | :---: |
|  |  |

- Check method

| POINT | WAVEFORM |
| :---: | :---: |
| A |  |
| B |  |
| C |  |

## NOTE

If clock does not keep exact time, you must check Diode D1 \& Transistor Q2 (KOC-972T/982T), Diode D1 \& Transistor Q1(KOC-984T/985T).
