PRECAUTIONS TO BE OBSERVED BEFORE AND DURING SERVICING TO AVOID POSSIBLE EXPOSURE TO EXCESSIVE MICROWAVE ENERGY

SAFETY AND PRECAUTIONS

- 1) For starters, be sure to check any chances of the leakage of electricity."
- 2) You could handle a part in the vicinity of electricity after unplugging.
- 3) You should put on rubber gloves to prevent an electric shock on operation test.
- 4) Make sure the rated current,voltage,capacity before using an instrument."
- 5) Keep your wet hands away from the metal goods in the freezer compartment not to be frostbitten.
- 6) Be careful not to let water permeate the electric part in the machine room.
- 7) With door open during your working,you might be damaged by door."
- 8) You should give a title to the refrigerator for your safe after removing the breakable goods inside the refrigerator.
- 9) You'd better use cotton gloves if you fix it up around the evaporator

- ① Resistance (R52) : Default resistance (31.4Kohms)
- ② Resistance (R53) : Cut the "J1" off to reduce basic resistance by 1.5°C. (2KΩ up)
- ③ Resistance (R54) : Cut the "J2" off additionally to reduce basic resistance by 1.5°C. (total 4KΩ up)

ex) $R52 = \text{R-SENSOR OFF point}$

$R52 + R53 = \text{R-SENSOR OFF point} - 1.5^{\circ}\text{C}$

$R52 + R53 + R54 = \text{R-SENSOR OFF point} - 3^{\circ}\text{C}$

10-15. Error Code

A. R-Sensor Error

- 1) Error Code : R1
- 2) Condition :
 - ① R-Sensor Open : It happens when R-Sensor is sensing less than -45°C
 - ② R-Sensor Short : It happens when R-Sensor is sensing more than 50°C
- 3) release : When R-Sensor is sensing from -45 to 50°C .

B. RT-Sensor Error

- 1) Error Code : Rt
- 2) Condition :
 - ① RT-Sensor Open : It happens when RT-Sensor is sensing less than -45°C
 - ② RT-Sensor Short : It happens when RT-Sensor is sensing more than 50°C
- 3) release : When RT-Sensor is sensing from -45 to 50°C .

C. D-Sensor Error

- 1) Error Code : D1
- 2) Condition :
 - ① D-Sensor Open : It happens when D-Sensor is sensing less than -45°C
 - ② D-Sensor Short : It happens when D-Sensor is sensing more than 50°C
- 3) release : When D-Sensor is sensing from -45 to 50°C

D. R-Door Error

- 1) Error Code : dr
- 2) Condition : It happens when the system senses R-Door opens more than 1 hour
- 3) release : If R-Door switch (close) is sensed, the error is terminated automatically

E. F-Door Error

- 1) Error Code : dF
- 2) Condition : It happens when the system senses F-Door opens more than 1 hour
- 3) release : If F-Door switch (close) is sensed, the error is terminated automatically

F. Cycle Error

- 1) Error Code : C1
- 2) Condition : When D-Sensor is more than -5°C , Comp operates over 3 hours
- 3) release : When Comp is off, D-Sensor is less than -5°C .

* When D-Sensor is normal operation, "C1" Error can be checked.

G. Return Defrost Error

- 1) Error Code : F3
- 2) Condition : Return to next limit defrost time.
- 3) release : Completion of defrost returned by D-Sensor.

* When D-Sensor is normal operation, "F3" Error can be checked.

10-16. Constraint

A. H/W Constraint

- According to the local environment and Micom Spec, hardware function can be constrained.

B. S/W Constraint

- Depending on the amount of memory and CPU performance may be different from the S / W performance results
- When operating with other and different applications, it may be deteriorated.
