### 8. Operation Noise of Refrigerator

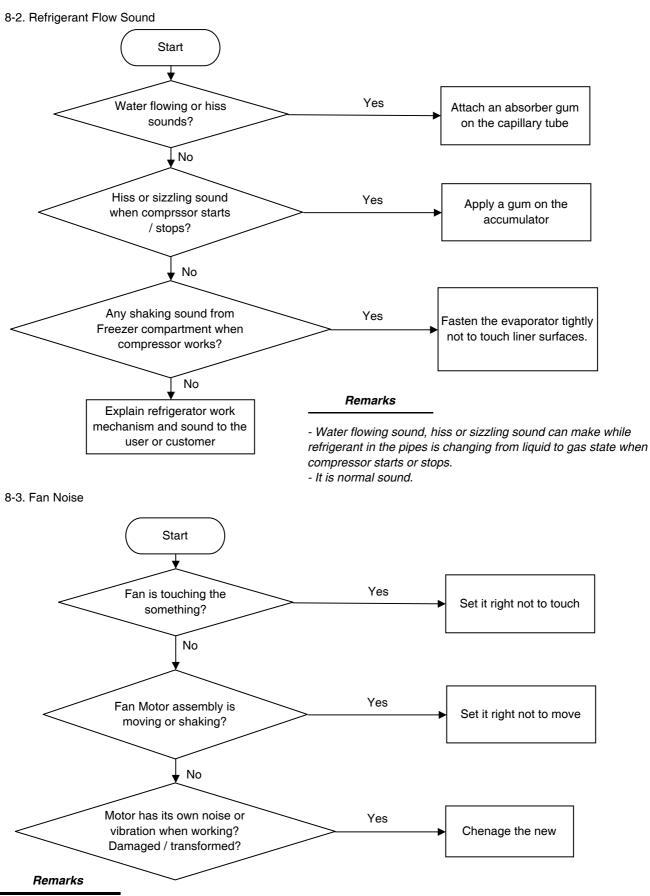

8-1. Compressor operation noise

#### Remark

- Compressor sound is somewhat normal because it works like a heart to circulate the refrigerant in the pipes.

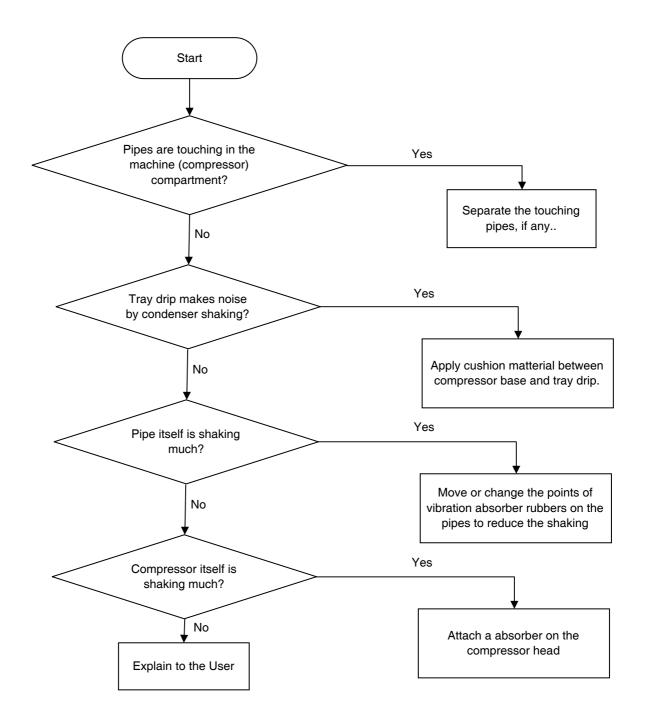

<sup>-</sup> Rattling or metalic touch sound of motor, piston of compressor can be heard when it starts or stops.

- The fan is sending out cold air to circulate each corner of the compartsment.

- When the air is touching the surface of louver or liner wall, such sound can make.

### 8-4. Pipe Noise

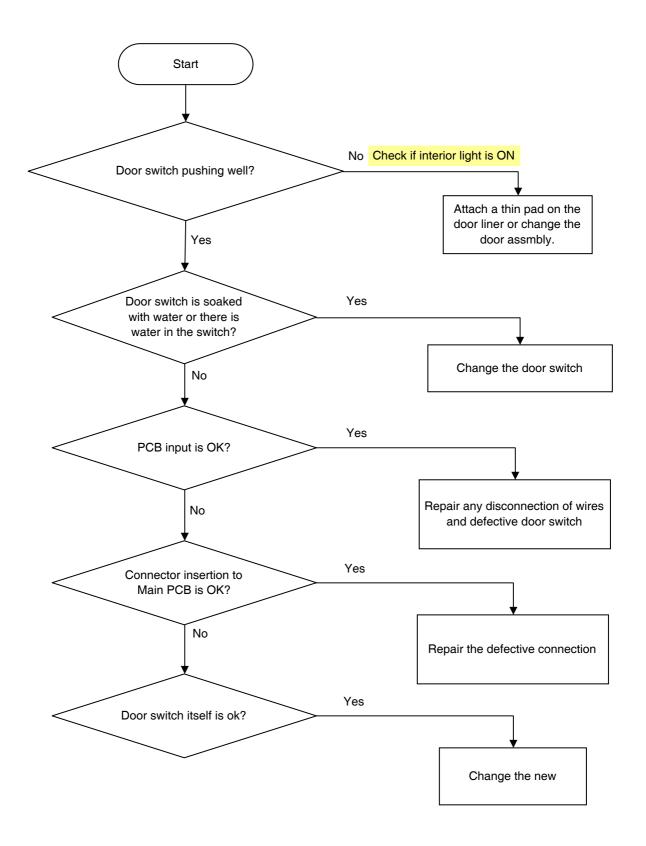

### Remarks

<sup>-</sup> Refrigerant is erupting rapidly from the compressor to circulate pipes, so pipe shaking noise can make to some degree.

<sup>-</sup> In case compressor vibration is sent to a pipe directly, apply vibration absorber rubbers to welding pionts of pipepe and compressor or to a much bent piont on the pipe.

### 1. Summary of Heavy Repair

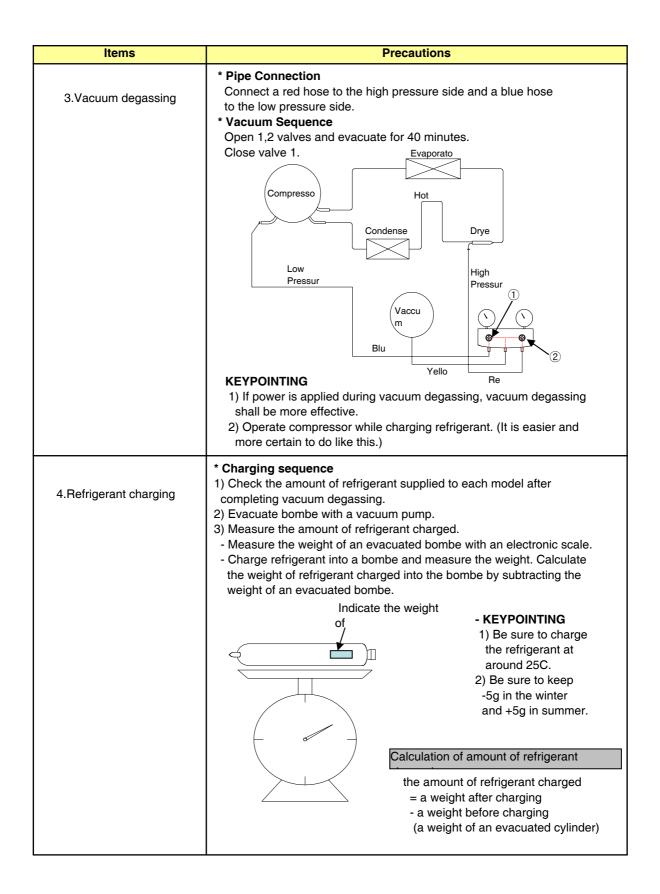

Process	Contents	Tools
Remove refrigerant Residuals	Cut charging pipe ends (Comp. & Dryer) and discharge refrigerant from drier and compressor.	Nipper, side cutters
Parts replacement and welding	Confirm refrigerant (R-134a or R-600a) and oil for compressor and drier. Confirm N2 sealing and packing conditions before use. Use good one for welding and assembly. Weld under nitrogen gas atmosphere. Repair in a clean and dry place.	Pipe Cutter, Gas welder, N2 gas
Vacuum	Evacuate for more than forty minutes after connecting manifold gauge hose and vacuum pump to high (drier) and low (compressor) pressure sides.	Vacuum pump , Manifold gauge.
Refrigerant charging and charging inlet welding	Weigh and control the bombe in a vacuum conditions with electronic scales and charge through compressor inlet (Process tube). Charge while refrigerator operates). Weld carefully after inlet pinching.	Bombe (mass cylinder), refrigerant manifold gauge, electronic scales, punching off flier, gas welding machine
Check refrigerant leak and cooling capacity	<ul> <li>Check leak at weld joints.</li> <li>Note :Do not use soapy water for check.</li> <li>Check cooling capacity</li> <li>Check condenser manually to see if warm.</li> <li>Check hot pipe manually to see if warm.</li> <li>Check frost formation on the whole surface of the evaporator.</li> </ul>	Electronic Leak Detector, Driver.
Compressor compartment and tools arrangement	Remove flux from the silver weld joints with soft brusher wet rag. (Flux may be the cause of corrosion and leaks.) Clean tools and store them in a clean tool box or in their place.	Copper brush, Rag, Tool box
Transportation and installation	Installation should be conducted in accordance with the standard installation procedure. (Leave space of more than 5 cm from the wall for compressor compartment cooling fan mounted model.)	

### 2. Precautions During Heavy Repair

Items	Precautions
Use of tools.	- Use special parts and tools for R-134a or R-600a.
Removal of retained refrigerant.	<ol> <li>Remove retained refrigerant more than 5 minutes after turning off a refrigerator. (If not, oil will leak inside.)</li> <li>Remove retained refrigerant by cutting first high pressure side (drier part) with a nipper and then cut low pressure side. (If the order is not observed, oil leak will happen.)</li> </ol>
	Low Evaporato Process Discharge tube Low Evaporato Hot Drye High Pressure High Pressure
Replacement of drier.	- Be sure to replace drier when repairing pipes and injecting refrigerant.
Nitrogen blowing welding.	- Weld under nitrogen atmosphere in order to prevent oxidation inside a pipe. (Nitrogen pressure : 0.1~0.2 kg/cm2.)
Others.	<ol> <li>Nitrogen only should be used when cleaning inside of cycle pipes inside and sealing.</li> <li>Check leakage with an electronic leakage tester.</li> <li>Be sure to use a pipe cutter when cutting pipes.</li> <li>Be careful not the water let intrude into the inside of the cycle.</li> </ol>

### 3. Practical Work for Heavy Repair

Item	Precautions
4.Refrigerant charging	<ul> <li>4) Refrigerant Charging Charge refrigerant while operating a compressor as shown above.</li> <li>5) Pinch a charging pipe with a pinch-off plier after completion of charging.</li> <li>6) Braze the end of a pinched charging pipe with copper brazer and take a gas leakage test on the welded parts.</li> </ul>
5. Gas-leakage test	* Take a leakage test on the welded or suspicious area with an electronic leakage tester.
6. Pipe arrangement in each cycle	* Check each pipe is placed in its original place before closing a cover back-M/C after completion of work.

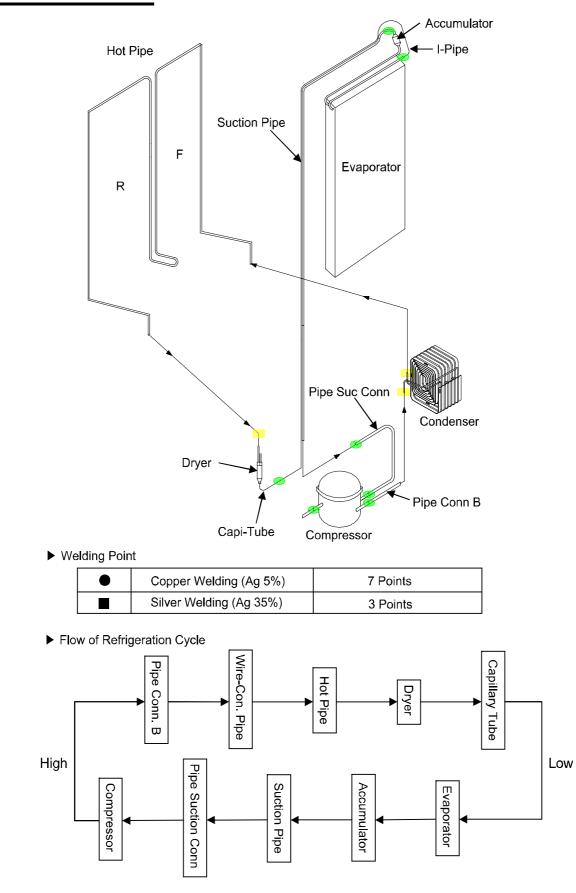

### < Standard Regulations for Heavy Repair >

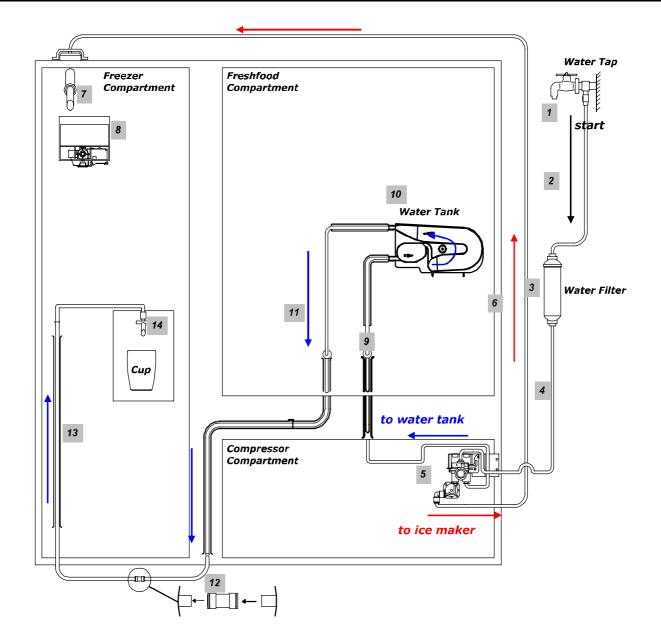

1) Observe the safety precautions for gas handling.

- 2) Use JIG (or wet towel) in order to prevent electric wires from burning during welding. (In order to prevent insulation break and accident.)
- 3) The inner case shall be melted and insulation material (polyurethane) shall be burnt
- if not cared during welding inner case parts.
- 4) The copper pipe shall be oxidized by overheating if not cared during welding.
- 5) Not allow the aluminum pipes to contact to copper pipes. (In order to prevent corrosion.)
- 6) Make sure that the inner diameter should not be distorted while cutting a capillary tube.
- 7) Be sure that a suction pipe and a filling tube should not be substituted each other during welding. (High efficiency pump.)

# How to install Water Line (Dispenser Models Only)

1. The water pressure should be 2.0~12.5 kgf/cm $^{2}$  or more to run the automatic icemaker.

\*Checkup your tap water pressure ; if a cup of 180cc is full within 10 seconds, the pressure is OK.

- 2. When installing the water tubes, ensure they are not close to any hot surfaces.
- 3. The water filter only "filters "water; it does not eliminate any bacteria or microbes.
- 4. If the water pressure is not so high to run the icemaker, call the local plumber to get an additional water pressure pump.
- 5. The filter life depends on the amount of use. We recommend you replace the filter at least once every 6months.
  When attaching the filter, place it for easy access (removing & replacing)
- 6. After installation of refrigerator and water line system, select [WATER] on your control panel and press it for 2~3 minutes to supply water into the water tank and dispense water.
- 7. Use sealing tape to every connection of pipes/tubes to ensure there is no water leak.
- 8. The water tube should be connected to the cold water line.

# Installation Procedure (Dispenser Models Only)

# 1. Join Connector to the tap water line

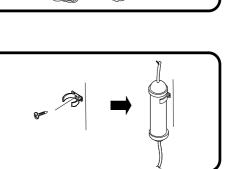

Water Tube

# 3. Remove any substances in the filter.

- 1) Open the main tap water valve and check if water comes out of the Water Tube.
- 2) Check if the Water Valve is open in case water does not come out.
- 3) Leave the valve open until clean water is coming out.
- Initial water may contain some substances out of filter (manufacturing process).

# 4. Attach the Filter Box

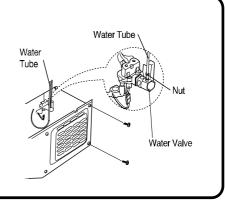

- Screw and fasten the filter holder to the left/right side of the back of refrigerator.
  - In case the holder is not fastened well, remove the back paper of the tape on the filter holder and attach it."
- 2) Insert the filter box into the holder.

# 5. Connect the Water Tube to the refrigerator.

- 1) Remove the rear cover at the bottom back of the refrigerator.
- 2) Insert the fastening ring into the Water tube. (Be careful to follow the direction of the nut.)
- 3) Insert the Water Tube into the top of the Water Valve, turn the nut clockwise to fasten it. (The Water valve is to the right of the motors.)
- 4) Check for any bent tubes or water leaks; if so, re-ckeck instalation procedure.
- 5) Replace the rear cover. (The Water Tube should be placed between the groove of the refrigerator back and motor cover.)

N.B. Set the tube upright as the figure shows.

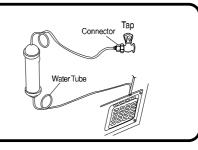

# 6. Fasten the Water Tube.

Fasten the Water Tube with the [Fastener A] .
 Check if the tube is bent or sqeezed. If so, set it right to prevent any water leak.

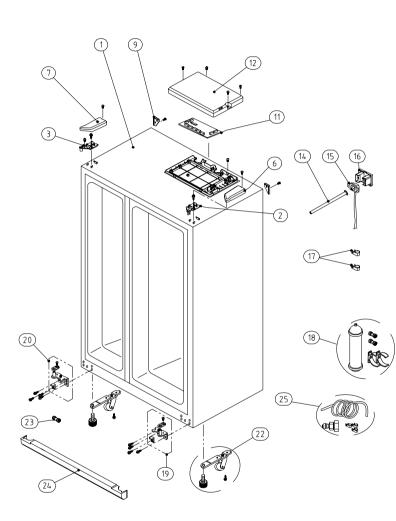

# 7. After installation of Water Supply System

- 1) Plug in the refrigerator, press the [WATER] button on the control panel for 2~3 minutes to remove any air (bubble) in the pipes and drain out the initial water.
- 2) Check for the water leaks again through the water supply system (tubes, connectors and pipes) Rearrange the tubes again and do not move the refrigerator.
