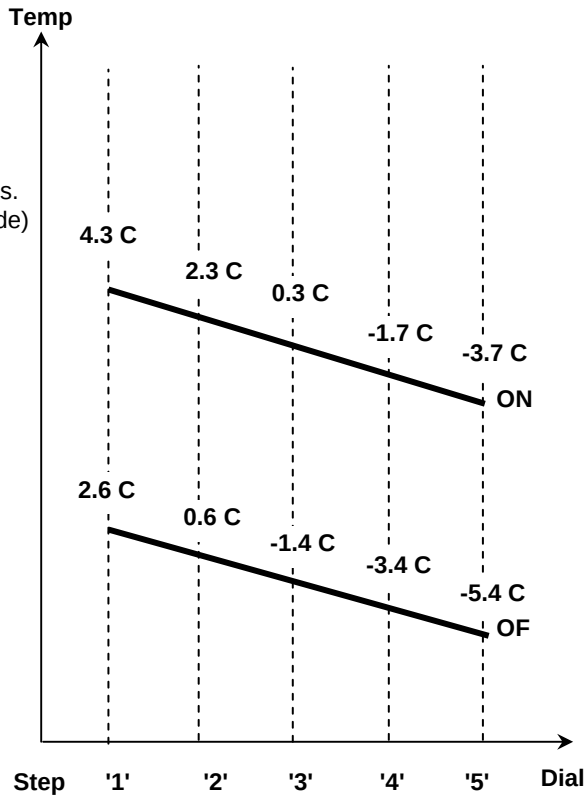
C. “S-COOL” MODE

1. Press S-COOL SWITCH
   and make S-COOL led lamp on.
2. COMP & FAN are on until R-sensor
   reaches to “Over Refrigeration
   OFF Point”, -7C
3. After the reach of -7°C , STEP “5” mode continues.
4. When “S-COOL” MODE (Quick Refrigeration Mode)
   lasts for about 40 minutes, it returns to general
   operation mode.



D. Temperature of Freezer Control

-It will be only controlled by using
“KNOB F LOUVER” in Freezer.

3. Defrost Mode

INPUT	CONTROL OBJECT
Total COMP Work Time / COMP Working Rate Total Door Open Time / RT	Defrost Mode

Conditions of Defrost Mode

A. When total operation time of compressor becomes: 6, 8, 10, 12 hours.
- any error mode-R1, D1, F3, C1, RT/S, Door SW error- happens.
- or, running rate of COMP (per 2hrs of total operation time) is more than 80%.
- or, total door open time is over 3 minutes.
- or, ambient temperature (RT) is more than 40C.

B. Even if the above condition "A" is not satisfied,
- Defrost mode starts immediately when total operation time of COMP is 14hrs.
- or, defrost mode starts immediately as long as total time (COMP on time + COMP off time) is 60 hrs.

Defrost Mode

A. General Defrost Mode
- How to start: By conditions of defrost
- Process :
  General operation-
  "PRE-COOL" - Defrost Heater on- Pause(10 min)-General operation
  ; PRE-COOL: When the defrost heater works, the temp. of freezer increases.
  So the COMP works for 25 min before defrost mode.
- Limited Time of Defrost Heater
  ; 40 minutes: Heater turns off when "D SENSOR" is OPEN or SHORT.
  ; 60 minutes: Heater turns off after maximum 60 minutes.
- Heater Off: When the temperature at "D SENSOR" is over 10C

	PRE-COOL	Defrost	Pause
Compressor	ON	OFF	OFF
Fan	ON	OFF	OFF
Defrost	OFF	ON	OFF

B. Forced Defrost Mode
- How to start: by press "TEMP" button for continuously and "S-COOL" button 5 times.
- Process: same as General Defrost Mode except "PRE-COOL"
  ; Heater is supposed to be on Initial 30 seconds even though the temp. at "D SENSOR" is over 10C. (for TEST)
- How to confirm: by press "S-COOL" button for continuously and "TEMP" button 5 times.
  And then, the mode displays.
- Display : led lamps "3"& "S-COOL" on, "4" & "5" on/off continually

Total COMP Work Time / COMP Working Rate Total Door Open Time / RT	Defrost Mode

Initial Defrost

A. When initial power input or returning power failure.

if the temperature at the Defrost Sensor is below 3.5 C, Defrost Mode starts.

(It prceeds from 'PRE-COOL'), **[PRE-COOL - Heater On - Pause (10min) - Normal Operation]**

B. Initial defrost mode starts after 'Prevention of Compressor Restart'. (Refer to function No. 5)

4. Function of Low Ambient Temperature (RT)	
INPUT	CONTROL OBJECT
RT	R-HTR COMP

A. Condition of LOW RT
- LOW RT Period : RT sensor below 19C
- When the temperature of RT sensor is over 20C, the system comes to be “General Operation Mode”.
- When the temp. of RT sensor is between 19°C to 20C, the system keeps the previous mode.

B. Control
- When Comp. is on, R-HTR is off.
- When it passes 6 min after COMP is off, R- HTR is on.
- COMP can’t be on within 30 min after COMP is off.
  ; COMP doesn’t work at the steps “Heater On” and “Pause” of “Defrost Mode”.
  If COMP comes to be off for “Low Room Temp” in the steps, it seems to take over 30 minutes.
- Change of “Prevention Time of COMP Restart” :
  If satisfy the following conditions simultaneously, the time changes 6 minutes.
  ; Accumulated running time of COMP passes 20 seconds after COMP is off.
  ; R-Sensor is more than ‘ON’ Point TEMP.
- When it is not the mode of LOW ROOM TEMP
  or RT-Sensor is on ERROR (open or short), R-Sensor HTR is off.
- Function of R-Heater Inspection:
  After initial power is on, R-HTR is on/off 5times for 10 seconds.
- When Defrost Heater is on, R-Sensor Heater is on

5. Prevention of Compressor Restart	
INPUT	CONTROL OBJECT
	COMP

COMP. doesn’t work after COMP turns off even though R-sensor is on condition. (This is to protect comp.)
A. General operation (Temp. at the RT sensor is over 20C): The COMP can’t be on within 6 min.
B. Operation of LOW RT (Temp. at the RT sensor is below 19C):
The COMP can’t be on within 30 min.
(But the COMP can be on after 6min when the doors open more than 20 seconds.)

1. Safety Warning (R-600a Refrigerant Models Only, RN-420N..)

This appliance contains a certain amount of isobutane refrigerant (R600a) a natural gas with high environmental compatibility that is, however, also combustible.

When transporting and installing the appliance, care should be taken to ensure that no parts of the refrigerating circuit are damaged.

Refrigerant squirting out of the pipes could ignite or cause an eye injury. If a leak is detected, avoid any naked flames or potential sources of ignition and air the room in which appliance is standing for several minutes.

- In order to avoid the creation of a flammable gas-air mixture if a leak in the refrigerating circuit occurs, the size of the room in which the appiance may be sited depends on the amount of refrigerant used. The room must be 1m3 in size for every 8g of R600a refrigerant inside the appliance. The amount of refrigerant is shown on the identification plate inside the appliance.
- Never start up an appliance showing any sings of damage. If in doubt, consult your dealer.

1	Connecting the pinch-plier & discharging hose		1. Connect the discharging hose to the pinch-plier 2. The outlet of discharging hose should be placed to the outdoor(window)
2	Fixing the pinch-plier & charging pipe		1. Fix the pinch-plier to the compressor charging pipe. 2. Pinch-plier should not be moving freely. ※ If that is moving freely, it would cause fire/explosion as leakage gas in the room.
3	**Discharging the R-600a ref.**		1. Discharge the R-600a ref. to outdoor. [Befor connecting the vacuum pump] ※ It should have enough time more than 7 minutes to discharge.

NO.	SVC process	Image	Details
4	Removing the remaining ref.		1. And then, connect the vacuum pump to the outlet of discharging hose ※Vacum pump should be placed at the outdoor where is able to clear air easily. ※ It should have enough time more than 10 minutes to discharge.
5	Removing the pinch-plier & pipe		1. Disassembe the each pipe (Del-pipe, Suc-pipe, Capi-pipe, Dryer & Hot-pipe) ※ Caution ; A part is easily damaged by flame so that disassemly should be done carefully.
6	Exchanging comp & dryer		1. Change the comp. & dryer. ※ You should check the comp. spec. and assemble correctly.
7	Welding	 	1. Weld the each pipe. ※ O Copper-Copper welding - 5% rod △ Copper-Steel welding - 30% rod
8	Disassembly of charging valve (Coupling pipe)		1. Decap the couplig pipe cap and disassemble the vlave ass'y. ※ If you don't disassemble, the coupling rubber would be melted.

NO.	SVC process	Image	Details
9	Coupling pipe welding		1. Weld after inserting the coupling pipe to the compressor. ※ Use the wet cloth for preventing the other part of machinery-room from damage.
10	Valve reass'y & guage connecting		1. Reassemble the valve ass'y with coupling pipe to clockwise. 2. Connect the blue hose of the guage to the coupling pipe and the yellow hose to the vacuum pump. 3. Open the blue guage lever and start the vacuum pump
11	Vacuum		1. Be vacuumed the cycle with pump. ※ Time : 60~80min => If the vacuum time is less than 60min, ref. COP & air coolong would be weak.
12	Check		1. Check the guage : -76㎝Hg ※ If the cycle is not vacuumed, it would be leak.
13	**Adjusting the amounts of refrigerants (R-600a can)**		1. Check the amounts of R-600a can with scale and discharge the surplus ref. ※ Discharging is surely done at the outdoor where is able to clear air. ※ Tip of adjusting. - Can total weight :160g(Can 75g+Ref. 85g) - Adapter : 145g => Total : 305g - The amounts of charging : 79g => Discharging : 6g => Total : 299g

14	Connecting of coupling pipe & adapta		1. Conect can adapter to the coupling pipe. 2. Charge the ref. with open lever slowly. ※ Refrigerant should never leak in the room.
15	Charging		1. On the power of refrigerator and then start to charge the ref. (10min) ※ Charge the ref. until going out the water vapour condensing on the can outlet.
16	Leakage Test		1. Check the leakage. ※ You must rework from Step.1 when the leakage is detected.
17	Finish		1. Clean and clear around the machinery room when the service is finished. 2. Assemble the machinery room cover.
