Test procedure for SERVICE-TEST-PROGRAM DOLPHIN *full-door dishwashers*

If there is a failure on the appliance, the customer will note it by open the door and the rapidly flashing start LED.

1. Open the door. When the start LED flashes rapidly, a failure is indicated. Then finish the program by pushing the start button until the start LED goes off.

If no more failure is indicated, start service test program.

Watch the function in accordance with the functional diagram.

2. Check the component.

Unplug the indicated component from the control board and check it by using an Ohm-measure equipment.

If the ohms are not correct, check the cables to the component and check the component itself.

3. Only if there is no reaction when pushing a push button, then test with the test points.

4. At the end of the repair start the test program again to see that the failure is solved.

More details: see chapter test program for service.

Attention:

First unplug the appliance, then set the connection clamps of the volt measurement on the test points.

Danger for short circuit.

More details see chapter test point.

Short circuits on components can damage the control board.

If electronic boards are wet, do not switch the appliance on.

The failures F1 NTC break

F2 water leakage

F9 continuous water inlet

are checked and indicated immediately after start of the program.

Therefore these failures have to be solved before starting the test program.

When these failures are not solved, the test program does not run.

The electrical components get their voltage via triac from the control board. For testing the volume of voltage the volt meter must be parallel to the component (the component must be plugged on). If the component is plugged off, then on the plug the measured voltage is reduced.

Handling of failures

F1. NTC break

- temperature out of the normal value (-10 degr. till +85 degr. C)

Possible failures

- heating higher than +85 degr. C
- NTC defective
- dishwasher is frozen, less than -10 degr. C

Text/Legend

F2. water leakage

- water is in the drip tray
- floater (LS6) switches off the WV1 and the electronic switches on the DPM till WI reports empty

F3. heating system defective

- too less heating speed (lower 1,5 degr. in 3 min.)
- heating (HEW) defective
- relais (RE2) defective

F4. draining failure

- drain pump starts and after 4 min. the WI detects not empty
- drain pump (DPM) defective
 - siphon closed
 - control board (CB) defective
 - water indicator (WI) defective (is switched on)

F5. spray arm blocked (leads not to stop the appliance)

- SAB sensor sends less than 10 impulses/min.
- spray arm blocked or not fixed well
 - selfcleaning microfilter blocked
 - spray pump (SPM) does not work well
 - SAB sensor defective

F6. water tap closed

- water valve (WV1) is switched on but flow meter (FM) sends no impulses (less than 10 imp. in 10 sec.) and the water indicator (WI) is at low level
- water tap closed
 - water inlet hose blocked
 - water inlet valve (WV1) defective
 - flow meter (FM) defective (leads to FM failure)

F7. flow meter failure

- water inlet valve is switched on and the water indicator (WI) is switched on high level
- flow meter (FM) sends to less impulses
(less than 10 imp. in 10 sec.)
 - water tap closed
 - water inlet hose blocked
 - water inlet valve (WV1) defective
 - flow meter (FM) defective
 - water indicator (WI) is defective

Text/Legend

F8. water level failure

failure monitored during spray pump is on and the water indicator switches back more than 10 times in 2 min.

- water indicator defective
- sieve blocked
- water strongly foams
- pot has turned off and is filled with spray water
- no stable spray pump (SPM) working

F9. continuous water inlet

water inlet valve (WV1) is switched off, water indicator (WI) on, flow meter (FM) sends impulses more than 10 imp. in 10 sec.

- water inlet valve (WV1) mechanically not closed
- triac (CB) for WV1 is closed

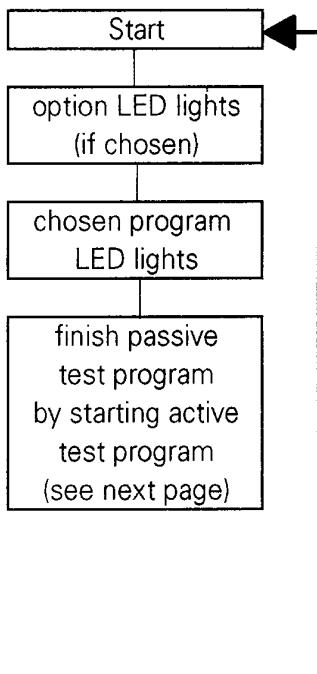

reaction: interval 30 sec. draining / 20 sec. tracing

For salt, rinse aid, zone wash valve, sieve valve failure see active test program.

Text/Legend

Indication of failures and alarms on appliances produced until September 1996

failure	failure no.	indication	indication within test program
NTC - break	F1	start LED flashes	start LED flashes
water leakage failure	F2	start LED flashes	start LED flashes
heating system failure	F3	start LED flashes	start LED flashes
draining failure	F4	start LED flashes	"beep" in one sec. rythm (only with door closed)
water tap closed inlet valve defect	F6	start LED flashes till tap will be opened	"beep" in one sec. rythm (only with door closed)
flow meter failure	F7	start LED flashes	"beep" in one sec. rythm (only with door closed)
water level failure	F8	start LED flashes	start LED flashes
water inlet continuously on	F9	start LED flashes	start LED flashes
salt		alarm LED on	alarm LED on
rinse agent		alarm LED on	alarm LED on

Passive test program

The failures are indicated by fast flashing start LED or "beep".

Start procedure:

1. If a program is running, finish it by pushing the start button (door is opened) until the start LED goes off (more than 3 sec.).
2. Close the door, so that the program can finish. (beep!)
3. Open the door again, choose program Bio Eco 50 °C (d).
4. Switch the appliance off.
5. Push start button and hold it pushed.
6. Switch the appliance on.
7. Release the start button when start LED flashes (after approx. 5 sec.) (the start LED flashes in a slow rhythm - 1,5 sec. on/0,5 sec. off).
If the start LED flashes immediately in a fast rhythm - 0,5 sec. on/0,5 sec. off, then mostly one of the failures F1, F2 or F9 occur.
These failures always have to be solved before test program can be started.
8. Passive test program is ready to start: Check the LEDs by pushing the buttons.

Remark:

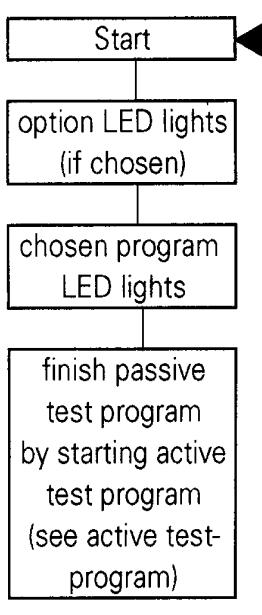

**If a wrong program is switched on when starting the test program, this will be indicated by a twice short acoustic signal.
Then start again as before.**

Text/Legend

Indication of failures and alarms on appliances produced from October 1996 on

failure	failure no.	indication	indication within test program	indication within test program by using the display board
NTC - break	F1	start LED flashes	one long "beep"3 sec.	PS 1 flashes
water leakage failure	F2	start LED flashes	one long "beep"3 sec.	PS 2 flashes
heating system failure	F3	start LED flashes	one long "beep"3 sec.	PS 3 flashes
draining failure	F4	start LED flashes	"beep" in one sec. rythm (only with door closed)	PS 4 flashes
water tap closed inlet valve defect	F6	start LED flashes till tap will be opened	"beep" in one sec. rythm (only with door closed)	PS 2+PS 4 flashes
flow meter failure	F7	start LED flashes	"beep" in one sec. rythm (only with door closed)	PS 3+PS 4 flashes
water level failure	F8	start LED flashes	one long "beep"3 sec.	PS 2+PS 3 flashes
water inlet continuously on	F9	start LED flashes	one long "beep"3 sec.	PS 1+PS 3 flashes
salt		alarm LED on	alarm LED on	alarm LED on
rinse agent		alarm LED on	alarm LED on	alarm LED on

The failures are indicated by acoustic signal "beep" or program sequence LED .

Passive test program**Start procedure:**

1. If a program is running, finish it by pushing the start button (door is opened) until the start LED goes off (more than 3 sec.).
2. Close the door, so that the program can finish. (beep!)
3. Open the door again, choose program Bio Eco 50 °C (d).
4. Switch the appliance off.
5. Push start button and hold it pushed.
6. Switch the appliance on.
7. Release the start button when start LED flashes (after approx. 5 sec.) (the start LED flashes in a slow rhythm - 1,5 sec. on/0,5 sec. off).
If the start LED flashes immediately in a fast rhythm - 0,5 sec. on/0,5 sec. off, then mostly one of the failures F1, F2 or F9 occur.
These failures always have to be solved before test program can be started.
8. Passive test program is ready to start: Check the LEDs by pushing the buttons.

**Clearer failure indication in the test program by using of a display board in addition
(see next page)**

Text/Legend

Clearer failure indication in the test program by using of a display board in addition

- A Start passive and active test program as usual.
- B When failure indication occurs (beep in 1 sec.rhythm or one long beep 3 sec.):
 - unplug the appliance
 - open the door
 - open the control panel and disconnect the 9-poles cable from the electronics
 - connect the 9-poles cable to the display board
 - plug in the appliance
 - close the door with opened control panel (door switch must be switched on)
- C The failure is indicated by the program sequence LEDs of the display board

Attention. The display board is not included the appliance. It can be ordered by the Spare Part Centres and used to help the Service. If there is no display board valid then the failure has to be found by following the program chart of the test program.

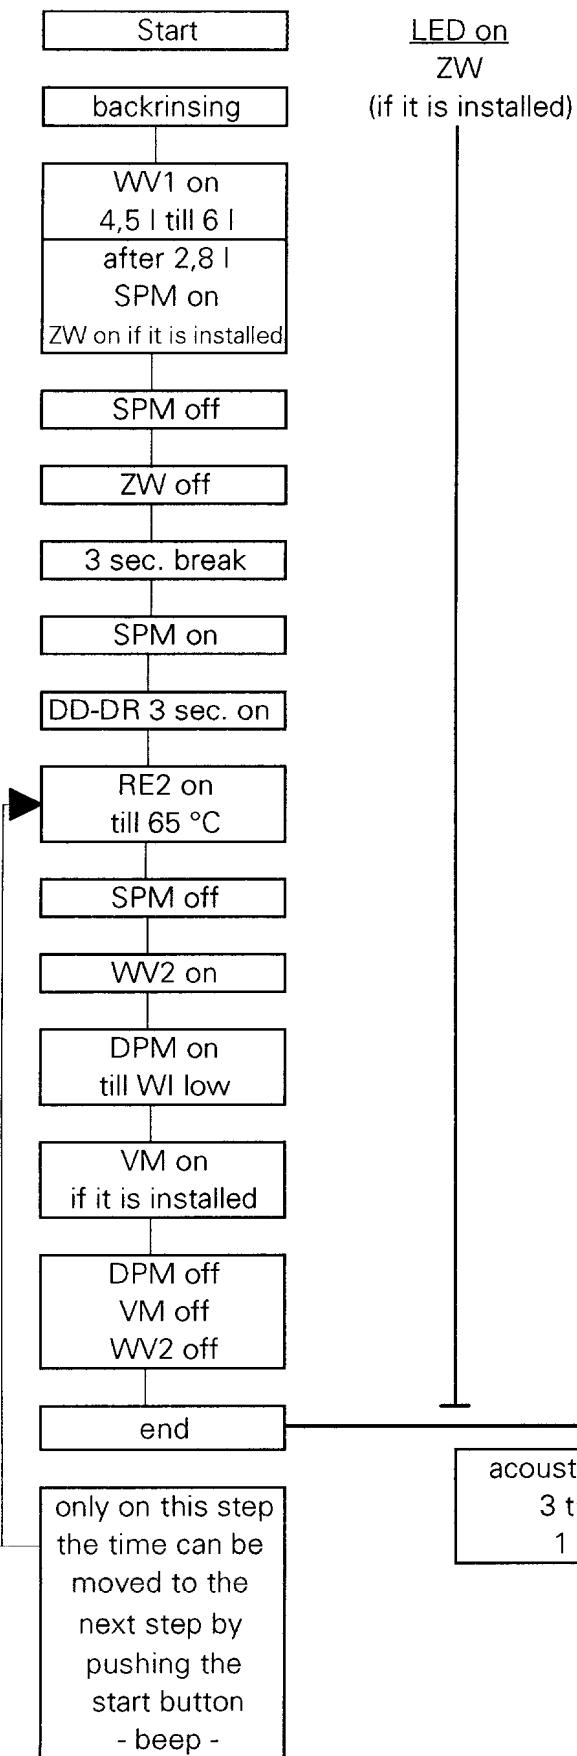

Display boards to use Generally can be used all kind of display boards.

as a Service help: Some order numbers:
4812 276 58036
4812 276 58037

Remark: If a wrong program is switched on when starting the test program, this will be indicated by a twice short acoustic signal.
Then start again as before.

Text/Legend

Active test program

Test procedure

1. passive test program O. K.?
no: repair failure
yes: push start button shorter than 3 sec. with door opened
(acoustic signal: beep)
2. active test program starts
after closing the door

Remarks

On these appliances the failure can only be found by starting the test program and following this by using the program chart. The failure indicate by fast flashing the start LED, or by "beep" in one sec. rythm (see indication of failures and alarms).

The active test program runs to the failure position and stops or, if there is no failure, to the end.

To leave the test progr. push start button for longer than 3 sec.

2 sec. after closing the door
the drain pump runs till end of the program.

Too less salt or too less rinse aid leads not to the stop of the appliance.

The function of the zone wash valve (ZW on) can only be checked optically.

A defect (not closing) leads to an instable SPM pressure.

The function of the sieve valve can only be checked optically.

In case of defect the housing of the selfcleaning microfilter is not empty on the end of the program.

Note:

ZW on means:

ZW is activated

- no water comes to the upper spray arm -

ZW off means:

ZW is not activated

- upper spray arm is turning -

Text/Legend

			Programs						
BK	IG	WP	a	b	c	d	e	f	g
	A3	A3	X			X		X	
		A5	X			X	X	X	X
B5			X			X	X	X	X
B7			X	X	X	X	X	X	X

- a** prewash cold
- b** glass 40 degr.
- c** rapid 50 degr.
- d** bio eco 50 degr. (with prewash)
- e** daily 65 degr. (without prewash)
- f** normal 65 degr. (with prewash cold)
- g** intensive 70 degr. (with prewash 40 degr.)

After having started a program this program is locked. That means that neither by unplugging/switching off the appliance nor by setting an other program, the first program set can be changed. Changing the program is only possible by pushing the start button again for longer than 3 sec.

The last program used is always stored. That means if the customer wants to use the same program again, the on-button and the start button have to be pressed.

Text/Legend

Test points on the control board

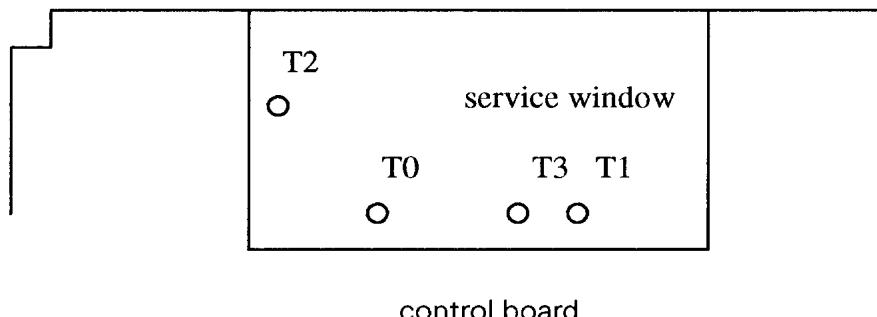

With these test points the function of the buttons can be checked.

The test points are in the service window on the control board.

For the test fine clamps, cables and volt meter with high input resistance are necessary.

Before setting the clamps on the test points, switch off the appliance.

Test points: T0 = common line T2 = analogue value
T1 = analogue value T3 = digital signal

When the door is opened and the appliance is switched on, then the connection between user control board and control board is interrupted and in all following tests the measured value is zero voltage.

Check: test point T0 to T1

After closing the door, the voltage is always -6 V.
It doesn't matter which button is pushed or not.
This value is also valid after program start.

Check: test point T0 to T2

	voltage	from	to
progr. a	appr. -1,54 V (DC)	user control board	control board
progr. b	appr. -2,06 V (DC)	user control board	control board
progr. c	appr. -2,57 V (DC)	user control board	control board
progr. d	appr. -3,42 V (DC)	user control board	control board
progr. e	appr. -3,96 V (DC)	user control board	control board
progr. f	appr. -4,47 V (DC)	user control board	control board
progr. g	appr. -5,00 V (DC)	user control board	control board

Test the start button

Choose a program and push the start button (start LED goes on).

Close the door:

value like the chosen program see list before.

Short time after closing the door the value decreases to 0 V (start signal) for 3 sec.
and then goes back to the voltage value before.

Check: test point T0 to T3

Communication between User-Control board and Controlboard

multiplexing appr. -3,18 V (DC)

How exact the data are depends on the measure equipment.
